

Human Factors in Signalling Systems

Specific Applications
to Railway Signalling

by

M. Mashour

Preface		3
Chapter 1	Human Factors	15
	1.1 The objectives	15
	1.2 Psychology and Human Factors	17
	Summary	19
Chapter 2	Human factors on railways	20
	2.1 A retrospect	20
	2.2 Human factors in signalling	22
	2.2.1 Signalling in the past	22
	2.2.2 Signals and accidents	22
	2.2.3 Improvement of signalling systems	23
	2.2.4 Speed and signalling	25
	2.2.5 Conclusions	29
	2.3 Errors related to primary signals	29
	2.3.1 Primary signals	29
	2.3.2 Types of error	30
	Summary	32
Chapter 3	Signal indications	34
	3.1 Types of indication	34
	3.1.1 What are indications?	34
	3.1.2 Encoding indications	35
	3.1.3 Definitions	35
	3.2 Indication organization	37
	3.2.1 Number of indications	37
	3.2.2 General case (G)	38
	3.2.3 Organization type A	40
	3.2.4 Organization type B	40
	3.2.5 Organization type C	41
	3.2.6 Organization type D	42

	3.2.7 Organization types E and F	43
	3.2.8 Analysis summary and results	44
	3.2.9 A comparison	46
3.3	Signal indications in use	48
	3.3.1 Problems related to C-indications	48
	3.3.2 An example of simple indications in practice	50
	3.3.3 The wording of indications	52
	3.3.4 Recommendations for selecting indications	54
	Summary	55
Chapter 4	Organization of signal configurations	57
4.1	The assignment of signals to indications	57
	4.1.1 The assignment strategy	57
	4.1.2 Pairwise assignment	58
	4.1.3 Groupwise assignment	59
4.2	Comparison of the assignment methods	60
	4.2.1 Two-stage processing	60
	4.2.2 One-stage processing	62
	Summary	63
Chapter 5	The physical aspects of signals	65
5.1	Introduction	65
	5.1.1 Standard colour lights	65
	5.1.2 Colour lights as symbols	66
5.2	The group aspects of signals	67
	5.2.1 The alphabet groups	67
	5.2.2 The aspects of M-signals and F-signals	68
	5.2.3 The flashing aspect as a group aspect	70
5.3	The individual aspects of signals	71
	5.3.1 Aspects and errors	71
	5.3.2 Colours as individual aspects	72
	5.3.3 Aspects of restrictive signals	75
	5.3.4 Improvement of energy aspects with decreasing speed	76
	5.3.5 Dimensionality of signals	77
	5.3.6 Differences of temporal aspects	79
	5.3.7 Position and background factors	80
	Summary	81

Chapter 6	The experimental signal systems	83
6.1	The problems	83
6.2	Organization characteristics	84
6.2.1	Indication organization	84
6.2.2	Signal organization	97
6.2.3	An organization comparison	101
6.3	Associations	106
6.3.1	Between-group association (BGA)	106
6.3.2	Within-group association (WGA)	107
6.3.3	Old associations	108
6.3.4	Confusion by similarity	109
6.4	Energy aspects	110
6.4.1	The between-group rule	110
6.4.2	The within-group rule	111
6.5	The OSJD-system and system Q	112
	Summary	114
Chapter 7	Degrees of difficulty in signal recognition—The experimental method	116
7.1	Introduction	116
7.2	Apparatus	117
7.2.1	Signal equipment	117
7.2.2	Registration and control equipment	120
7.2.3	Response equipment	122
7.3	Procedure	126
7.3.1	General conditions	126
7.3.2	Learning the response arrays	127
7.3.3	Learning to recognize	128
7.3.4	Retention	129
7.3.5	System P	130
	Summary	130
Chapter 8	Degrees of difficulty in signal recognition—The experimental results	132
8.1	Rank orders of the systems	132
8.1.1	Comparison criteria	132
8.1.2	Learning curves	133
8.1.3	Comparison of trend differences	136

8.1.4	Comparison by other criteria	138
8.2	Comparison of simple and combined signals	140
8.2.1	Time of reaction	140
8.2.2	Reaction to signals—a between-system comparison	141
8.2.3	Reaction to simple and combined signals	143
8.3	Analysis of correct responses	146
8.3.1	Correct responses	146
8.4	Errors	149
8.5	Retention	155
8.5.1	Consistency of the subjects' responses	155
8.5.2	Difficulty levels of signals	156
8.5.3	Difficulty levels of systems	157
8.6	Concluding remarks	157
	Summary	159

Chapter 9 Signal detection 161

9.1	Human capacity for information processing	161
9.1.1	The detection process	161
9.1.2	Failure in detection	161
9.1.3	Detection capacity	162
9.1.4	Detection capacity in locomotion	165
9.1.5	Information load and search	166
9.1.6	Information load and velocity	166
9.1.7	Ordinary overload	167
9.1.8	Memory in locomotion	168
9.1.9	Effect of motion on the eye	168
9.2	Energy aspects of signals	169
9.2.1	Contrast	169
9.2.2	Signal luminance	173
9.2.3	Signal size	175
9.2.4	Changing contrast	177
	Summary	178

Chapter 10 Empirical determination of the effects of energy aspects on signal detection 179

10.1	Introduction	179
10.2	Experimental method	181

10.2.1	Apparatus	181
10.2.2	Test signals	183
10.2.3	Procedure	186
10.3	Results	188
10.3.1	Speed and accuracy in signal detection	188
10.3.2	Control of fatigue effects	195
10.3.3	Detection performance as related to differences between signals	196
10.3.4	Rank orders of signals in terms of detectability	198
10.4	Conclusions	203
	Summary	204

Chapter 11 Subjective determination of the effects of signals on detection 206

11.1	Methods	206
11.1.1	Test material and procedure	206
11.2	Results	208
11.2.1	Judgment by the method of rank order	208
11.2.2	Judgment by the method of magnitude estimation	210
11.3	Comments and conclusions	211
	Summary	213

Chapter 12 Simulation—Basic considerations 214

12.1	Performance aspects and the problem of fidelity	214
12.1.1	Performance in real situations	214
12.1.2	The problems	215
12.1.3	The fidelity problem	217
12.2	A system analysis	217
12.2.1	Man-machine interactions	217
12.2.2	Information flows	218
12.3	Control-theoretical considerations	223
12.3.1	Control theory and human behaviour	223
12.3.2	Output dimensionality	225
12.3.3	Output accuracy	226
	Summary	226

Chapter 13	Description of the simulation method	228
13.1	Simulator cabin 228	
13.1.1	Devices related to flow I 230	
13.1.2	Provisions for vigilance and attention control 231	
13.1.3	Vibration, etc. 232	
13.2	Controls and registrations 234	
13.2.1	Equipment of the simulator experimenter 235	
13.2.2	Equipment of the registration experimenter 236	
13.2.3	Automatic registration 239	
13.3	The visual field 239	
13.3.1	General characteristics 239	
13.3.2	Signals 240	
13.4	Mechanisms for signal presentation 241	
13.4.1	Projector as the steering centre 241	
13.4.2	Central units 242	
13.5	Procedure 245	
13.5.1	Preparation of the visual field 245	
13.5.2	Positioning of signals 249	
13.5.3	Vigilance signs and attention control 251	
13.5.4	Signal systems 252	
13.5.5	The experimental session 253	
	Summary 256	
Chapter 14	Operator's performance in simulation situation	258
14.1	Results of the learning test 258	
14.1.1	A between-system comparison 258	
14.1.2	Differentiation of error 260	
14.2	Attention 262	
14.2.1	Attention results 263	
14.2.2	Tracking performance 264	
14.3	Vigilance 265	
14.3.1	Detection frequency 265	
14.3.2	Detection failures 266	

	14.3.3	Variation of detection frequency with time	268
	14.3.4	Conclusions	271
		Summary	272
Chapter 15	Error analysis		274
	15.1	Classification	274
	15.1.1	Types of error	274
	15.1.2	Error sums	277
	15.1.3	Recognition and detection errors	278
	15.1.4	Recall errors	279
	15.1.5	Manual response errors	281
	15.1.6	Combined responses	282
	15.2	Comparison of systems in terms of errors	284
	15.2.1	Between-system differences in each type of error	284
	15.2.2	Pairwise comparison of the systems	286
	15.2.3	Within-system comparisons in each type of error	290
	15.3	Error specification	291
	15.3.1	Recognition errors	291
	15.3.2	Combined recognition and speed errors	293
	15.3.3	Detection errors	294
	15.3.4	Speed errors	298
	15.3.5	Overrunning errors	300
	15.4	Confusion of signals and indications	302
	15.5	Associations among types of error	304
	15.5.1	Correlation matrices	304
	15.5.2	Degrees of association	305
	15.5.3	Between-system associations	310
		Summary	312
Chapter 16	Final comments		314
	16.1	System to recommend	314
	16.2	Reduction of error	315
Appendix I	Derivation of number of systems from the constituent signal aspects		317
