

# COMPUTER-AIDED SIMULATION IN RAILWAY DYNAMICS

**RAO V. DUKKIPATI**  
**JOSEPH R. AMYOT**

# CONTENTS

PREFACE	iii
1. INTRODUCTION	1
1.1 Introduction	1
1.2 Simulation Concepts	2
1.3 Scope	6
1.4 Model Development	11
References	14
2. PHYSICAL ASPECTS	16
2.1 Introduction	16
2.2 Tracks	17
2.3 Wheel-Rail Interaction	24
2.4 Trucks	34
2.5 Vehicles	42
2.6 Trains	49
2.7 Summary	57
References	58
3. MATHEMATICAL FOUNDATION	61
3.1 Introduction	61
3.2 Dynamic Performance Indices	62
3.3 Track Models	72
3.4 Wheel-Rail Models	83
3.5 Truck Models	97
3.6 Vehicle Models	102
3.7 Train Models	129
3.8 Summary	134
References	135

4.	PARAMETER IDENTIFICATION AND MODEL VALIDATION	140
4.1	Introduction	140
4.2	Track Parameters	141
4.3	Wheel-Rail Parameters	155
4.4	Truck Parameters	156
4.5	Vehicle Parameters	173
4.6	Train Parameters	184
4.7	System Identification Methods	188
4.8	Model Validation	196
4.9	Summary	202
	References	202
5.	CASE STUDIES	209
5.1	Introduction	209
5.2	Wheel-Rail Geometric Constraints	210
5.3	Passenger Vehicle Vertical Dynamics	223
5.4	Freight Car Curving Dynamics	236
5.5	Locomotive Response to Track Irregularities	245
5.6	Longitudinal Train Action	257
5.7	Summary	267
	References	268
6.	SOFTWARE SURVEY	271
6.1	Introduction	271
6.2	Track Structure Programs	273
6.3	Wheel-Rail Interaction Programs	279
6.4	Vehicle Dynamics Programs	284
6.5	Train Dynamics Programs	314
6.6	Structural Mechanics Programs	332
6.7	Tabulations	335
6.8	Abbreviations	336
6.9	Summary	342
	References	343

## CONTENTS

*ix*

7. TRACK SIMULATORS	352
7.1 Introduction	352
7.2 Architecture	353
7.3 Analytical Foundation	362
7.4 Curved Track Simulator Software	376
7.5 Validation	402
7.6 Track Simulators Survey	404
7.7 Nomenclature	410
7.8 Summary	415
References	416
INDEX	419
