

QUEST FOR CRISIS

— a world-ranging search for clues to the transport future

by James N. Sites

GUIDE TO CONTENTS

INTRODUCTION — America sinks deeper into a strange transport quagmire. What's happening in other countries? What are others doing to clear the track toward carrier stability and better service? The quest for answers . . .

1

TURMOIL IN BRITISH TRANSPORT — “Muddling through” on public policies stirs up unprecedented transport turmoil, turns British railways into an economic and physical monstrosity. Out of government upheaval, a barrelful of object lessons.

2

OPPOSITE TRENDS IN THE TWO IRELANDS: EIRE GIVES RAILROADS A NEW DEAL — Dublin overhauls its public transportation policies, signals “all clear” for a closely coordinated, diversified transport system.

3

NORTHERN IRELAND: THE END OF THE RAIL LINE? — Can railroads survive growing competition? Ulster indicates that under special conditions, the answer may be *no*.

4

SUCCESS STORY IN SWITZERLAND — Sound government policies and heads-up operations combine to make both money and friends for the Swiss railroads. For politicians, a lesson in non-interference.

5

SUCCESS STORY NO. 2: THE NETHERLANDS — Private enterprise concepts are injected into a nationalized business. A case history on the fine art of controlling transport capacity.

6

ITALY: AN OVERLOAD OF POLITICS — Political and labor pressures clutter up the track, producing bulging losses for the railroad and splitting headaches for the nation.

7

VALUED POINTERS FROM VEXING PROBLEMS — Spain constructs new track which no one uses. Greek railroads run up the biggest deficit ratios in Europe. Belgium takes the public for a “free” ride.

8

FRENCH RAILROADS HOLD THE LINE — With a strong assist from government, the SNCF streamlines equipment, turns to daring price innovations to reorganize the nation’s transport network. Where are the trucks to Marseilles? Where are the trains to Normandy?

9

GERMANY RAISES THE EQUALITY STANDARD — Equal government treatment of all carriers becomes the byword as Bonn drives toward modernization of transport and a halt to the drain of railroad red ink.

10

NEW TRANSPORT POLICIES FOR THE NEW EUROPE — As border barriers come down and continental transport systems take shape, the idea of freedom to compete dominates Common Market thinking on common policies. But what’s wrong with all carriers paying their own way?

11

NORWAY: SOCIALISTS GIVE COMPETITION A GREEN LIGHT—Oslo loosens up regulations, enacts a hotly debated kilometer tax to equalize roadway cost burdens, starts feeding a capital-starved railroad.

12

TRAINS HIGHBALL TOWARD A NEW DAY IN DENMARK—Drastic pruning of branches and modernization of mainlines give railroads a new lease on life, clear the way toward super-service.

13

RAILS AND ROADS COEXIST IN SWEDEN—Radically reorganizing the transport structure, Stockholm gets high-class combination services. But can trains on tracks outrun cars on roads?

14

FINNISH RAILROADS: ANOTHER 100 YEARS?—A troubled land lays down new railroad track to remedy ruptured arteries.

15

LOUIS ARMAND LOOKS TO THE FUTURE—One of postwar Europe's "three wise men" foresees a great new era of railroading IF government does its part and lets carriers adjust to change.

16

INDIA: ANCIENT MONOPOLY AND MODERN CRISIS—The rail monopoly of the West's past lingers on in the Subcontinent, but truck, airplane and auto are coming up fast. The key question for developing nations: What kind of policies will head off the storm before it strikes?

17

MESS IN THE MIDEAST — In Turkey, Israel and Iran, transport runs wild —and the public pays the bill.

18

MEETING THE UNEXPECTED IN YUGOSLAVIA — Tito's policies take a turn from rigid controls toward competition. Communists give pointers on how to coordinate capital investment for all carriers, avoid waste.

19

RUSSIA REACHES FOR SUPER-RAILROADS — Moscow singles out the Iron Horse to carry the big loads of growth, gets the most transport for the least money. In the making: A super-railroad handling titanic loads.

20

CITY TRAFFIC SNARLS: WHERE A TRAIN CAN BE A CAR'S BEST FRIEND — Swelling numbers of autos raise hob with narrow streets, force European cities to crack down, emphasize mass transit for rapid circulation through historic urban centers.

21

REALISM ON NATIONALIZATION — Why guess about its effects? From other countries, case histories with a moral.

22

CONCLUSIONS: BRIGHT TRAIL TO THE TRANSPORT FUTURE — What the quest means in practical results. Can we apply horse sense to the Space Age? What governments and management can do to build solidity into the shaky transport structure, get out better service at far lower costs.
