

TRANSPORT

FINAL REPORT
DGVII – TRANSPORT

**European Railways Optimisation Planning
Environment -
Transportation Railways Integrated Planning**

TRIP

Contract RA-97-AM-1165

June 2000

Version 1.0

Volume Contents

EXECUTIVE SUMMARY	5
Introduction.....	5
Objectives.....	5
System Model Specifications and Business Model Demonstrator.....	6
Market Algorithms	6
Market Game Model	7
Line capacity analysis.....	7
Cost methods.....	8
Conclusions.....	8
OBJECTIVES OF THE PROJECT	10
1. SCENARIO AND SYSTEM MODEL SPECIFICATIONS	13
1.1. Introduction	13
1.2. The directives.....	13
1.2.1. Directive 91/440	13
1.2.2. Directive 95/19	13
1.2.3. New directive proposals	14
1.2.4. The structure of the European rail industry	14
1.2.5. The players	15
1.2.6. Relationships between the players	16
1.2.7. Business planning.....	17
1.3. Key concepts and their representation.....	18
1.3.1. Representation of line capacity and timetables	18
1.3.2. Costs of using infrastructure	19
1.3.3. Representation of access rights	20
1.3.4. Representation of access to infrastructure.....	20
1.3.5. Performance criteria	20
1.3.6. TRIP and the “infrastructure package”.....	21
2. THE RAILWAY LINE CAPACITY	22
2.1. Introduction	22
2.2. A framework of analysis.....	22
2.3. The 3-level framework.....	24
2.4. General time-tabling considerations	27

2.4.1. 'Limit' or bottleneck section	27
2.4.2. Maintenance	27
2.4.3. Slow-downs - Regularity margins	27
2.4.4. Diagramming techniques	27
2.5. Congestion	28
2.6. The TRIPLIB proposed methodology	29
2.7. Analytic Methods	30
2.8. Scheduling Algorithms	31
2.8.1. Introduction	31
2.8.2. The FLOU Algorithm	32
2.8.3. Test case	32
2.8.4. The TCM Algorithm	34
2.9. Simulation Analysis	38
2.10. Conclusions	41
2.11. Bibliography	43
3. COST OF USING INFRASTRUCTURE	44
3.1. Study Overview	44
3.2. Models and applications of rail infrastructure costs	44
3.2.1. Historical backgrounds	44
3.2.2. The nature of infrastructure costs	45
3.2.3. The UIC contribution	49
3.2.4. External costs	51
3.2.5. Cost methods analysis	51
3.2.6. Cost allocation methods	52
3.3. The LIBERAIL-TRIP Case Study	54
3.4. CORINNE (COst Railway Infrastructure Network)	58
3.5. DEA (Data Envelopment Analysis)	59
3.6. Cost of using Intermodal Terminals	62
3.7. Infrastructure costs in the future	63
3.8. Conclusions and recommendations	66
3.9. Bibliography	67
4. HOW TO SHARE RAIL INFRASTRUCTURE COSTS	68
4.1. Introduction	68
4.2. Method overview	68

4.3. How to apply the concepts	70
4.4. Generalised Airport Game - Maintenance and Infrastructure cost games.....	71
4.5. Conclusions and applications.....	72
4.6. Bibliography	74
5. ACCESS TO INFRASTRUCTURE: THE INTEGRATED MODEL	75
5.1. Introduction	75
5.2. The model.....	77
5.3. Case study	80
5.4. Conclusions.....	82
5.5. Bibliography	83
6. ACCESS TO INFRASTRUCTURE: THE AUCTION MODEL	85
6.1. Introduction	85
6.2. Overriding objectives in capacity allocation	85
6.3. Economic aspects on infrastructure use and congestion	87
6.4. The Problem of Allocating Track Capacity	88
6.4.1. General features of the sector's capacity allocation problem.....	88
6.4.2. Demand and supply characteristics of track capacity allocation.....	89
6.5. An efficiency-enhancing model for track capacity allocation.....	89
6.5.1. The two analytical sub-problems.....	89
6.5.2. The auction and the time-tabling process	90
6.6. Additional aspects of the allocation process.....	95
6.6.1. The micro-design of the process.....	95
6.6.2. Objectives other than efficiency	95
6.6.3. Complementarities.....	96
6.7. Conclusions.....	97
6.8. Bibliography	98
7. THE BUSINESS PLANNING MODEL	99
7.1. Introduction	99
7.2. Model Description.....	99
7.3. Model structure.....	101
7.4. Demonstrator outline	103

7.4.1. Setting up a model simulation.....	103
7.4.2. Resource decisions.....	104
7.4.3. Running the model.....	106
7.4.4. Testing policies for infrastructure management.....	107
7.5. Conclusions.....	110
7.6. Bibliography	111
8. TRIP AND THE PROPOSED EUROPEAN DIRECTIVE ON RAIL INFRASTRUCTURE ACCESS AND CHARGING	112
8.1. The principles of the EU proposal.....	112
8.2. Infrastructure charges.....	114
8.2.1. Establishing, determining and collecting charges (Art. 4).....	114
8.2.2. Infrastructure costs and accounts (Art.6).....	114
8.2.3. Principles of Charging (Art. 8)	115
8.2.4. Exceptions to charging principles (Art. 9).....	115
8.3. Capacity allocation	115
8.3.1. Co-ordinated and Capacity-constrained infrastructure (Art.2).....	115
8.3.2. The network statement (Art.3).....	116
8.3.3. Principles of charging (Art.8)	117
8.3.4. Performance scheme (Art.12)	118
8.3.5. Reservation charges (Art.13)	118
8.3.6. Capacity rights (Art. 14).....	118
8.3.7. Network statement – capacity allocation (Art.17).....	118
8.3.8. Principles of allocation (Art 18).....	119
8.3.9. Framework agreements (Art.20)	119
8.3.10..... Scheduling (Art.23).	120
8.3.11..... Coordination process (Art.24)	120
8.3.12..... Scarcity of capacity (Art.25)	120
8.3.13..... Short-notice requests (Art.26)	121
8.3.14..... Specialised infrastructure (Art.27)	122
8.3.15..... Capacity analysis (Art.28)	122
8.3.16..... Capacity enhancement plan (Art.29)	123
8.3.17..... Infrastructure capacity for maintenance (Art.31)	123
8.4. Conclusions.....	125
9. CONCLUSIONS OF THE REPORT	126
APPENDIX.....	128
